## **ABOUT THIS MANUAL**

#### Purpose

This manual describes the assembly, installation, operation and troubleshooting of this unit. Please read this manual carefully before installations and operations. Keep this manual for future reference.

#### Scope

This manual provides safety and installation guidelines as well as information on tools and wiring.

## SAFETY INSTRUCTIONS

# WARNING: This chapter contains important safety and operating instructions. Read and keep this manual for future reference.

- 1. Before using the unit, read all instructions and cautionary markings on the unit, the batteries and all appropriate sections of this manual.
- 2. **CAUTION** --To reduce risk of injury, charge only deep-cycle lead acid type rechargeable batteries. Other types of batteries may burst, causing personal injury and damage.
- 3. Do not disassemble the unit. Take it to a qualified service center when service or repair is required. Incorrect re-assembly may result in a risk of electric shock or fire.
- 4. To reduce risk of electric shock, disconnect all wirings before attempting any maintenance or cleaning. Turning off the unit will not reduce this risk.
- 5. CAUTION Only qualified personnel can install this device with battery.
- 6. **NEVER** charge a frozen battery.
- 7. For optimum operation of this inverter/charger, please follow required spec to select appropriate cable size. It's very important to correctly operate this inverter/charger.
- 8. Be very cautious when working with metal tools on or around batteries. A potential risk exists to drop a tool to spark or short circuit batteries or other electrical parts and could cause an explosion.
- 9. Please strictly follow installation procedure when you want to disconnect AC or DC terminals. Please refer to INSTALLATION section of this manual for the details.
- 10. One piece of 150A fuse is provided as over-current protection for the battery supply.
- 11. GROUNDING INSTRUCTIONS -This inverter/charger should be connected to a permanent grounded wiring system. Be sure to comply with local requirements and regulation to install this inverter.
- 12. NEVER cause AC output and DC input short circuited. Do NOT connect to the mains when DC input short circuits.
- 13. **Warning!!** Only qualified service persons are able to service this device. If errors still persist after following troubleshooting table, please send this inverter/charger back to local dealer or service center for maintenance.
- 14. **WARNING:** Because this inverter is non-isolated, only three types of PV modules are acceptable: single crystalline, poly crystalline with class A-rated and CIGS modules. To avoid any malfunction, do not connect any PV modules with possible current leakage to the inverter. For example, grounded PV modules will cause current leakage to the inverter. When using CIGS modules, please be sure NO grounding.
- 15. **CAUTION:** It's requested to use PV junction box with surge protection. Otherwise, it will cause damage on inverter when lightning occurs on PV modules.

## INTRODUCTION

This is a multi-function inverter/charger, combining functions of inverter, solar charger and battery charger to offer uninterruptible power support with portable size. Its comprehensive LCD display offers user-configurable and easy-accessible button operation such as battery charging current, AC/solar charger priority, and acceptable input voltage based on different applications.

### Features

- Pure sine wave inverter
- Inverter running without battery
- Configurable input voltage range for home appliances and personal computers via LCD setting
- Configurable battery charging current based on applications via LCD setting
- Configurable AC/Solar Charger priority via LCD setting
- Compatible to mains voltage or generator power
- Auto restart while AC is recovering
- Overload/ Over temperature/ short circuit protection
- Smart battery charger design for optimized battery performance
- Cold start function

### **Basic System Architecture**

The following illustration shows basic application for this inverter/charger. It also includes following devices to have a complete running system:

- Generator or Utility.
- PV modules

Consult with your system integrator for other possible system architectures depending on your requirements.

This inverter can power all kinds of appliances in home or office environment, including motor-type appliances such as tube light, fan, refrigerator and air conditioner.

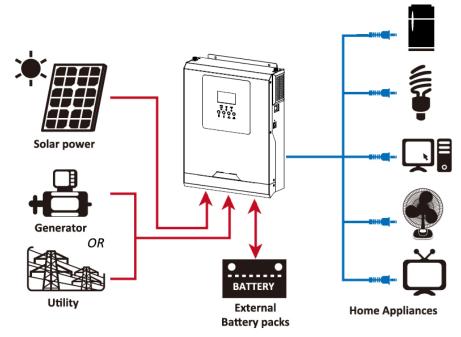

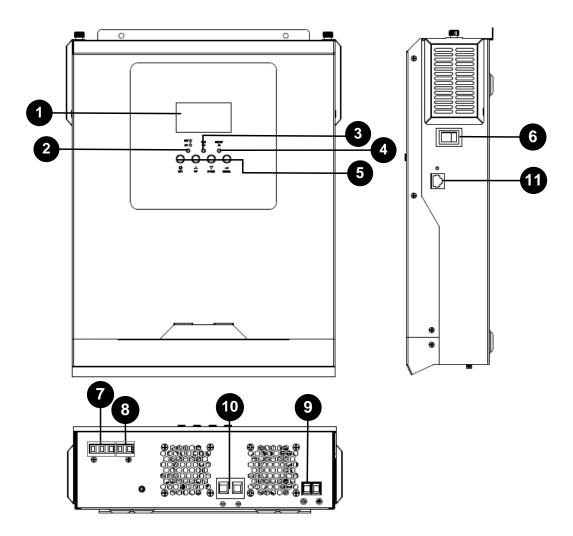

Figure 1 Hybrid Power System

#### **Product Overview**

- 1. LCD display
- 2. Status indicator
- 3. Charging indicator
- 4. Fault indicator
- 5. Function buttons
- 6. Power on/off switch
- 7. AC input
- 8. AC output
- 9. PV input
- 10. Battery input
- 11. RS-232 communication port

## INSTALLATION

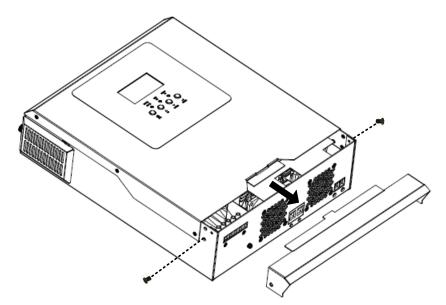

### **Unpacking and Inspection**

Before installation, please inspect the unit. Be sure that nothing inside the package is damaged. You should have received the following items inside of package:

- The unit x 1
- User manual x 1
- Communication cable x 1
- Strain relief plate x 1
- Screws x 2

#### Preparation

Before connecting all wirings, please take off bottom cover by removing screws as shown below.

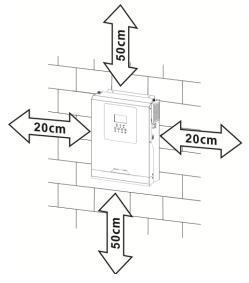

### **Mounting the Unit**

Consider the following points before selecting where to install:

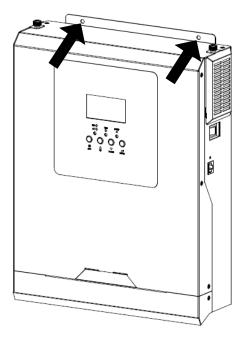

- Do not mount the inverter on flammable construction materials.
- Mount on a solid surface
- Install this inverter at eye level in order to allow the LCD display to be read at all times.
- For proper air circulation to dissipate heat, allow a clearance of approx. 20 cm to the side and approx. 50 cm above and below the unit.
- The ambient temperature should be between 0°C and 55°C to ensure optimal operation.
- The recommended installation position is to be adhered to the wall vertically.
- Be sure to keep other objects and surfaces as shown in the diagram to guarantee sufficient heat dissipation and to have enough space for removing wires.

## SUITABLE FOR MOUNTING ON CONCRETE OR OTHER NON-COMBUSTIBLE SURFACE ONLY.

Install the unit by screwing two screws. It's recommended to use M4 or M5 screws.

### **Battery Connection**

#### This model can be operated without battery connection. Connect to battery if necessary.

**CAUTION:** For safety operation and regulation compliance, it's requested to install a separate DC over-current protector or disconnect device between battery and inverter. It may not be requested to have a disconnect device in some applications, however, it's still requested to have over-current protection installed. Please refer to typical amperage in below table as required fuse or breaker size.

**WARNING!** All wiring must be performed by a qualified personnel.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for battery connection. To reduce risk of injury, please use the proper recommended cable as below.

#### **Recommended battery cable size:**

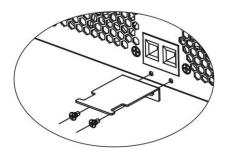

Model	Wire Size	Cable (mm <sup>2</sup> )	Torque value ( max )
1.5KVA	1 x 4AWG	25	2 Nm

Please follow below steps to implement battery connection:

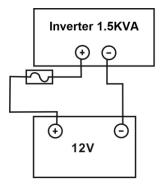

1. Remove insulation sleeve 18 mm for positive and negative conductors. Suggest to put bootlace ferrules on the end of positive and negative wires with a proper crimping tool.

18-1	
	+
1 <u>8-</u> 1	
	—

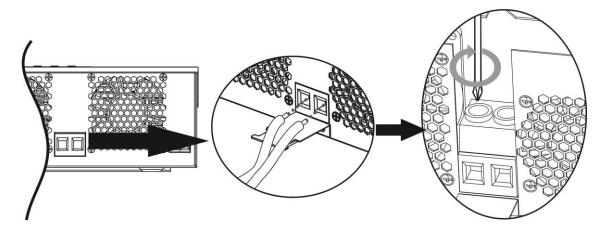

2. Fix strain relief plate to the inverter by supplied screws as shown in below chart.

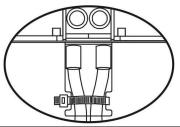

3. Connect all battery packs as below chart. It is recommend to connect at least 100Ah capacity battery.

4. Insert the battery wires flatly into battery connectors of inverter and make sure the bolts are tightened with torque of 2 Nm in clockwise direction. Make sure polarity at both the battery and the inverter/charge is correctly connected and conductors are tightly screwed into the battery terminals. Recommended tool: #2 Pozi Screwdriver

5. To firmly secure wire connection, you may fix the wires to strain relief with cable tie.

#### WARNING: Shock Hazard

<u>'!</u>\

Installation must be performed with care due to high battery voltage in series.

**CAUTION!!** Do not apply anti-oxidant substance on the terminals before terminals are securely tightened.

**CAUTION!!** Before making the final DC connection or closing DC breaker/disconnector, be sure

### AC Input/Output Connection

**CAUTION!!** Before connecting to AC input power source, please install a **separate** AC breaker between inverter and AC input power source. This will ensure the inverter can be securely disconnected during maintenance and fully protected from over current of AC input. The recommended spec of AC breaker is 20A. **CAUTION!!** There are two terminal blocks with "IN" and "OUT" markings. Please do NOT mis-connect input and output connectors.

**WARNING!** All wiring must be performed by a qualified personnel.

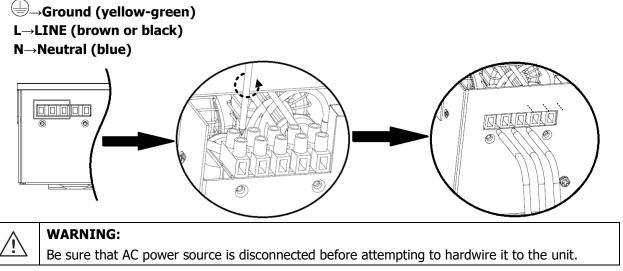

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for AC input connection. To reduce risk of injury, please use the proper recommended cable size as below.

#### Suggested cable requirement for AC wires

Model	Gauge	Cable (mm <sup>2</sup> )	Torque Value
1.5KVA	16 AWG	1.5	0.6 Nm

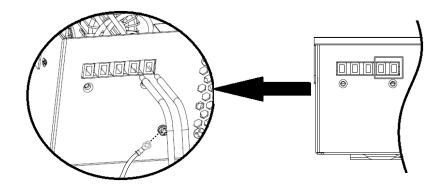

Please follow below steps to implement AC input/output connection:

- 1. Before making AC input/output connection, be sure to open DC protector or disconnector first.
- 2. Remove insulation sleeve 10mm for six conductors. And shorten phase L and neutral conductor N 3 mm.
- 3. Insert AC input wires according to polarities indicated on terminal block and tighten the terminal screws. Be sure to connect PE protective conductor ( ) first.

4. Then, insert AC output wires according to polarities indicated on terminal block and tighten terminal screws. Be sure to connect PE protective conductor ( ) first.

→Ground (yellow-green)
 L→LINE (brown or black)
 N→Neutral (blue)

5. Make sure the wires are securely connected.

**CAUTION:** Appliances such as air conditioner are required at least 2~3 minutes to restart because it's required to have enough time to balance refrigerant gas inside of circuits. If a power shortage occurs and recovers in a short time, it will cause damage to your connected appliances. To prevent this kind of damage, please check manufacturer of air conditioner if it's equipped with time-delay function before installation. Otherwise, this inverter/charger will trig overload fault and cut off output to protect your appliance but sometimes it still causes internal damage to the air conditioner.

#### **PV** Connection

**CAUTION:** Before connecting to PV modules, please install **separately** a DC circuit breaker between inverter and PV modules.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for PV module connection. To reduce risk of injury, please use the proper recommended cable size as below.

Wire Size	Cable (mm <sup>2</sup> )	Torque value ( max )
1 x 12AWG	4	1.2 Nm

**WARNING:** Because this inverter is non-isolated, only three types of PV modules are acceptable: single crystalline, poly crystalline with class A-rated and CIGS modules.

To avoid any malfunction, do not connect any PV modules with possible current leakage to the inverter. For example, grounded PV modules will cause current leakage to the inverter. When using CIGS modules, please be sure NO grounding.

**CAUTION:** It's requested to use PV junction box with surge protection. Otherwise, it will cause damage on inverter when lightning occurs on PV modules.

#### **PV Module Selection:**

When selecting proper PV modules, please be sure to consider below parameters:

- 1. Open circuit Voltage (Voc) of PV modules not exceeds max. PV array open circuit voltage of inverter.
- 2. Open circuit Voltage (Voc) of PV modules should be higher than min. battery voltage.

Max. PV Array Open Circuit Voltage	400Vdc	
PV Array MPPT Voltage Range	30~400Vdc (30~60V with Battery)	

Take 250Wp PV module as an example. After considering above two parameters, the recommended module configurations are listed as below table.

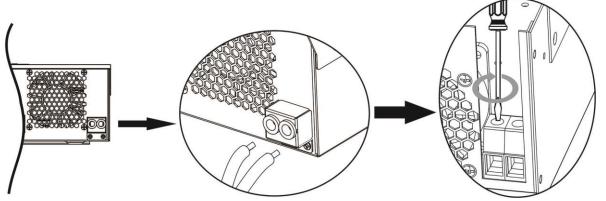

Solar Panel Spec. (reference)	SOLAR INPUT	Q'ty of	Total input
- 250Wp - Vmp: 30.1Vdc	(Min in serial: 3 pcs, max. in serial: 10 pcs)	panels	power
- Imp: 8.3A	3 pcs in serial	3 pcs	750W
- Voc: 37.7Vdc	6 pcs in serial	6 pcs	1500W
- Isc: 8.4A	8 pcs in serial	8 pcs	2000W
- Cells: 60	10 pcs in serial	10 pcs	2500W

#### **PV Module Wire Connection**

Please follow below steps to implement PV module connection:

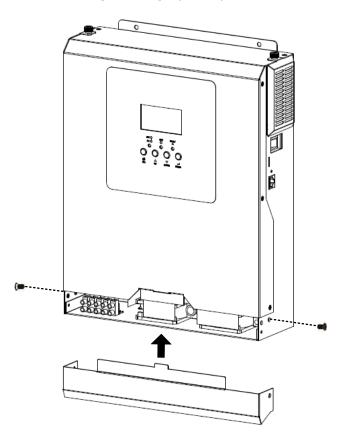

- 1. Remove insulation sleeve 10 mm for positive and negative conductors.
- 2. Suggest to put bootlace ferrules on the end of positive and negative wires with a proper crimping tool.
- 3. Check correct polarity of wire connection from PV modules and PV input connectors. Then, connect positive pole (+) of connection wire to positive pole (+) of PV input connector. Connect negative pole (-) of connection wire to negative pole (-) of PV input connector. Screw two wires tightly in clockwise direction.

Recommended tool: 4mm blade screwdriver

#### **Final Assembly**

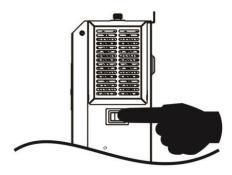

After connecting all wirings, please put bottom cover back by screwing two screws as shown below.

## **OPERATION**

### **Power ON/OFF**

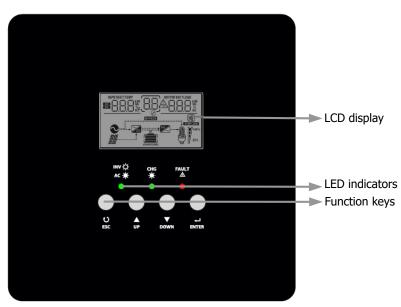

Side view of unit

Once the unit has been properly installed and the batteries are connected well, simply press On/Off switch (located on the button of the case) to turn on the unit.

### **Operation and Display Panel**

The operation and display panel, shown in below chart, is on the front panel of the inverter. It includes three indicators, four function keys and a LCD display, indicating the operating status and input/output power information.

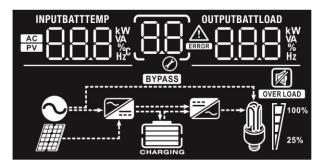

#### **LED Indicator**

	LED Indicator		Messages
INV××	Croop	Solid On	Output is powered by utility in Line mode.
AC 🔆	AC 🔆 Green	Flashing	Output is powered by battery or PV in battery mode.
CHG	CHG	Solid On	Battery is fully charged.
*	Green	Flashing	Battery is charging.
FAULT	Ded	Solid On	Fault occurs in the inverter.
▲	Red	Flashing	Warning condition occurs in the inverter.

#### **Function Keys**

Function Key	Description			
ESC	To exit setting mode			
UP	To go to previous selection			
DOWN	To go to next selection			
ENTER	To confirm the selection in setting mode or enter setting mode			

## LCD Display Icons

Icon	Function description						
Input Source Information							
AC	Indicates the AC input.						
PV	Indicates the PV input						
	Indicate input voltage, input frequency, PV voltage, charger current, charger power, battery voltage.

	Indicates unit connects to the PV panel.						
BYPASS	Indicates load is supplied by utility power.						
	Indicates th	Indicates the utility charger circuit is working.					
	Indicates th	Indicates the DC/AC inverter circuit is working.					
Mute Operation							
<b>N</b>	Indicates u	Indicates unit alarm is disabled.					

## **LCD Setting**

After pressing and holding ENTER button for 3 seconds, the unit will enter setting mode. Press "UP" or "DOWN" button to select setting programs. And then, press "ENTER" button to confirm the selection or ESC button to exit.

Setting	Setting Programs:						
Program	Description	Selectable option					
00	Exit setting mode	Escape					
		Utility first (default)	Utility will provide power to the loads as first priority. Solar and battery energy will provide power to the loads only when utility power is not available.				
01	Output source priority: To configure load power	Solar first	Solar energy provides power to the loads as first priority. If solar energy is not sufficient to power all connected loads, Utility energy will supply power to the loads at the same time.				
	To configure load power source priority	SBU priority	Solar energy provides power to the loads as first priority. If solar energy is not sufficient to power all connected loads, battery energy will supply power to the loads at the same time. Utility provides power to the loads only when battery voltage drops to either low-level warning voltage or the setting point in program 12.				
02	Maximum charging current: To configure total charging current for solar and utility chargers. (Max. charging current = utility charging current + solar charging current)	60A (default)	Setting range is from 10A to 80A. Increment of each click is 10A.				
03	AC input voltage range	Appliances (default)	If selected, acceptable AC input voltage range will be within 90-280VAC.				
			If selected, acceptable AC input voltage range will be within 170-280VAC.				

#### Setti D

			Flooded
05	Battery type		If "User-Defined" is selected, battery charge voltage and low DC cut-off voltage can be set up in program 26, 27 and 29.
06	Auto restart when overload occurs	Restart disable (default)	Restart enable
07	Auto restart when over temperature occurs	Restart disable (default)	Restart enable
09	Output frequency	50Hz (default)	60Hz 0960 <sub>нz</sub>
10	Output voltage	220V 10 220V 240V	230V (default)
	Maximum utility charging current		
11	Note: If setting value in program 02 is smaller than that in program in 11, the inverter will apply charging current from program 02 for utility charger.	40A (default)	Setting range is 2A, then from 10A to 80A. Increment of each click is 10A.
		11.0V	11.3V
	Setting voltage point back to utility source when selecting "SBU priority" or "Solar first" in program 01.		
12		11.5V (default)	
		12.5V	12.8V

		Battery fully charged	12.0V	
		12.3V	12.5V	
		12.8V	13.0V	
12	Setting voltage point back to battery mode when			
13	selecting "SBU priority" or	13.3V	13.5V (default)	
	"Solar first" in program 01.			
		13.8V	14.0V	
		14.3V	14.5V	
		If this inverter/charger is working in Line, Standby or Fault mode,		
	Charger source priority: To configure charger source priority	Charger source can be progra	Utility will charge battery as first priority. Solar energy will charge battery only when utility power is not available.	
16		Solar first	Solar energy will charge battery as first priority. Utility will charge battery only when solar energy is not available.	
		Solar and Utility (default)	Solar energy and utility will charge battery at the same time.	
		Only Solar	Solar energy will be the only charger source no matter utility is available or not.	
		_	ing in Battery mode, only solar olar energy will charge battery if it's	
18	Alarm control	Alarm on (default)	Alarm off	

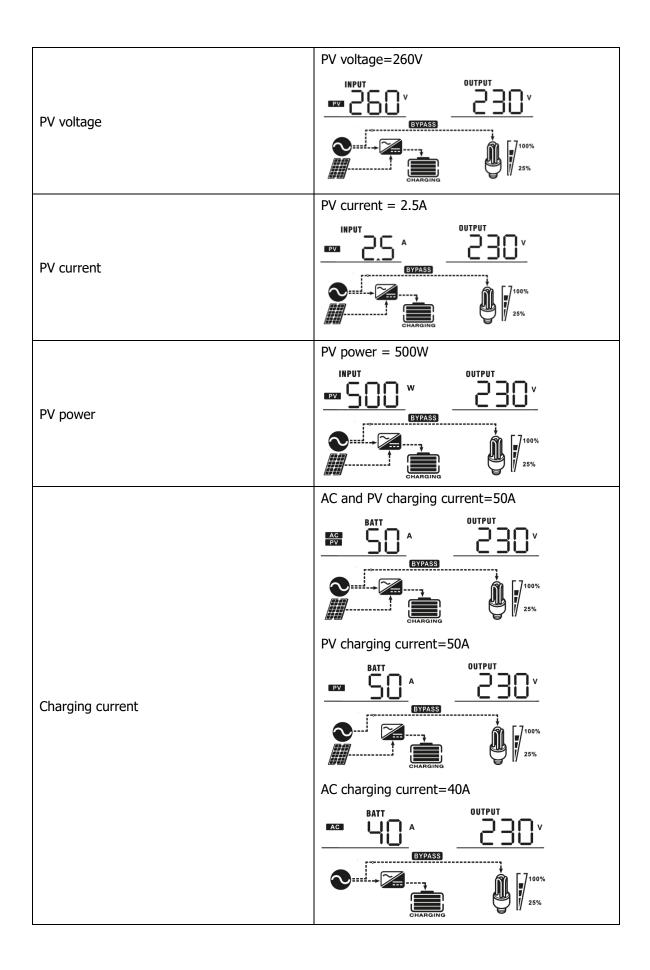

19	Auto return to default display screen	Return to default display screen (default) $I \bigcirc E \subseteq P$ $\otimes$ I = Stay at latest screen $I \bigcirc P$	If selected, no matter how users switch display screen, it will automatically return to default display screen (Input voltage /output voltage) after no button is pressed for 1 minute. If selected, the display screen will stay at latest screen user finally switches.
20	Backlight control	Backlight on (default)	
22	Beeps while primary source is interrupted	Alarm on (default)	Alarm off
23	Overload bypass: When enabled, the unit will transfer to line mode if overload occurs in battery mode.	Bypass disable (default)	Bypass enable
25	Record Fault code	Record enable (default) $P_{O}$	Record disable
26	Bulk charging voltage (C.V voltage)		<b>BATT</b> rogram 5, this program can be set V to 15.0V. Increment of each click is
27	Floating charging voltage		rogram 5, this program can be set V to 15.0V. Increment of each click is
29	Low DC cut-off voltage	up. Setting range is from 10.5 0.1V. Low DC cut-off voltage matter what percentage of loa	
30	Battery equalization	Battery equalization	Battery equalization disable (default)

		If "Flooded" or "User-Defined" is selected in program 05, this	
		program can be set up.	
		Default setting: 14.6V	
31	Battery equalization voltage	E	IUS v
		Setting range is from 12.0 0.1V.	IV to 15.0V. Increment of each click is
		60min (default)	Setting range is from 5min to 900min.
33	Battery equalized time	3 <u>3_60</u> _	Increment of each click is 5min.
		120min (default)	Setting range is from 5min to 900 min.
34	Battery equalized timeout	3 <mark>4_150_</mark>	Increment of each click is 5 min.
		30days (default)	Setting range is from 0 to 90 days.
35	Equalization interval	32 <u>304</u>	Increment of each click is 1 day
		Enable	Disable (default)
	Equalization activated immediately	<u>36 86U</u>	3 <u>6 RdS</u>
36		If equalization function is enabled in program 30, this program can be set up. If "Enable" is selected in this program, it's to activate battery equalization immediately and LCD main page will shows	
		"Eq". If "Disable" is selected, it will cancel equalization function until next activated equalization time arrives based on program 35	
		setting. At this time, "	" will not be shown in LCD main page.

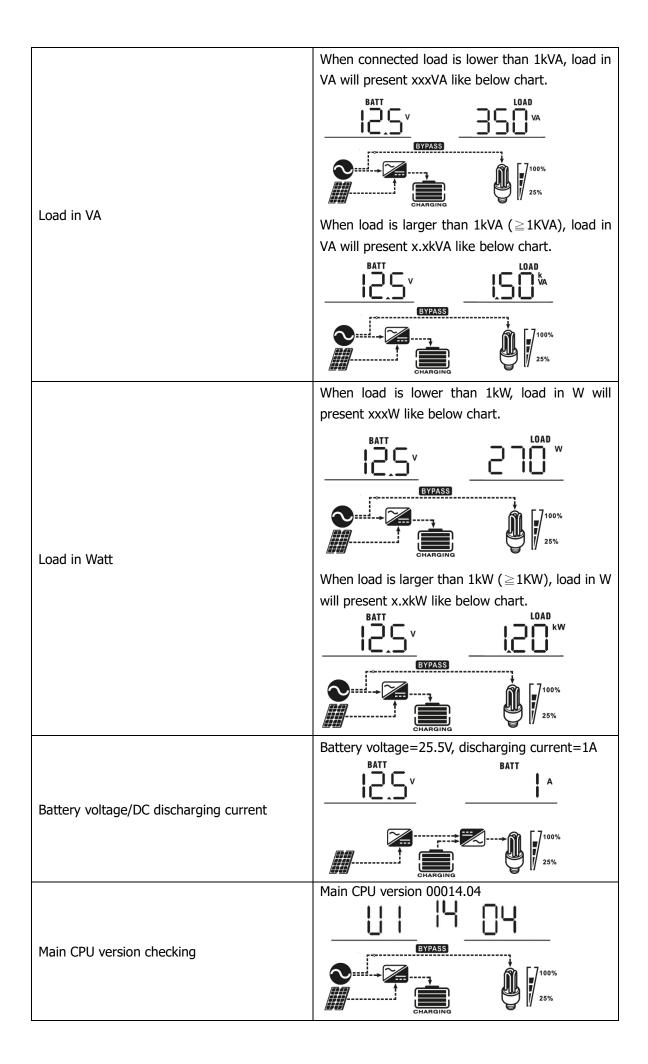

### **Display Setting**

The LCD display information will be switched in turns by pressing "UP" or "DOWN" key. The selectable information is switched as below order: input voltage, input frequency, PV voltage, charging current, charging power, battery voltage, output voltage, output frequency, load percentage, load in Watt, load in VA, load in Watt, DC discharging current, main CPU Version.

Selectable information	LCD display
Input voltage/Output voltage (Default Display Screen)	Input Voltage=230V, output voltage=230V
Input frequency	Input frequency=50Hz

## **Operating Mode Description**

Operation mode	Description	LCD display
Standby mode <b>Note:</b> *Standby mode: The inverter is not turned on yet but at this time, the inverter can charge battery without AC output.	No output is supplied by the unit but it still can charge batteries.	Charging by utility and PV energy.
Fault mode Note: *Fault mode: Errors are caused by inside circuit error or external reasons such as over temperature, output short circuited and so on.	PV energy and utility can charge batteries.	Charging by utility and PV energy.
Line Mode	The unit will provide output power from the mains. It will also charge the battery at line mode.	Charging by utility and PV energy.

Operation mode	Description	LCD display
Line Mode	The unit will provide output power from the mains. It will also charge the battery at line mode.	If "solar first" is selected as output source priority and solar energy is not sufficient to provide the load, solar energy and the utility will provide the loads and charge the battery at the same time. If "solar first" is selected as output source priority and battery is not connected, solar energy and the utility will provide the loads. Power from utility.
Battery Mode	The unit will provide output power from battery and PV power.	Power from battery and PV energy.

### **Battery Equalization Description**

Equalization function is added into charge controller. It reverses the buildup of negative chemical effects like stratification, a condition where acid concentration is greater at the bottom of the battery than at the top. Equalization also helps to remove sulfate crystals that might have built up on the plates. If left unchecked, this condition, called sulfation, will reduce the overall capacity of the battery. Therefore, it's recommended to equalize battery periodically.

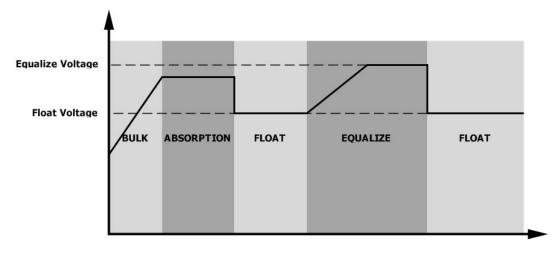

#### • How to Apply Equalization Function

You must enable battery equalization function in monitoring LCD setting program 30 first. Then, you may apply this function in device by either one of following methods:

- 1. Setting equalization interval in program 35.
- 2. Active equalization immediately in program 36.

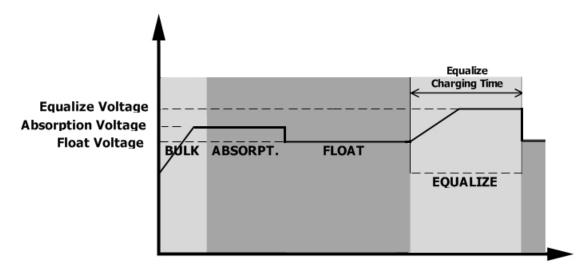

#### • When to Equalize

In float stage, when the setting equalization interval (battery equalization cycle) is arrived, or equalization is active immediately, the controller will start to enter Equalize stage.

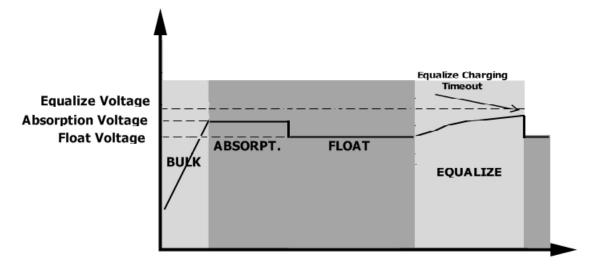

#### • Equalize charging time and timeout

In Equalize stage, the controller will supply power to charge battery as much as possible until battery voltage raises to battery equalization voltage. Then, constant-voltage regulation is applied to maintain battery voltage at the battery equalization voltage. The battery will remain in the Equalize stage until setting battery equalized time is arrived.

However, in Equalize stage, when battery equalized time is expired and battery voltage doesn't rise to battery equalization voltage point, the charge controller will extend the battery equalized time until battery voltage achieves battery equalization voltage. If battery voltage is still lower than battery equalization voltage when battery equalized timeout setting is over, the charge controller will stop equalization and return to float stage.

### **Fault Reference Code**

Fault Code	Fault Event	Icon on
01	Fan is locked when inverter is off.	
02	Over temperature or NTC is not connected well.	
03	Battery voltage is too high	
04	Battery voltage is too low	
05	Output short circuited or over temperature is detected by internal converter components.	<u>OS</u>
06	Output voltage is too high.	06
07	Overload time out	
08	Bus voltage is too high	08_
09	Bus soft start failed	
51	Over current or surge	ال
52	Bus voltage is too low	<u> </u>
53	Inverter soft start failed	[J]
55	Over DC voltage in AC output	<u> </u>
57	Current sensor failed	
58	Output voltage is too low	58
59	PV voltage is over limitation	59

## Warning Indicator

Warning Code	Warning Event	Audible Alarm	Icon flashing
01	Fan is locked when inverter is on.	Beep three times every second	
02	Over temperature	None	
03	Battery is over-charged	Beep once every second	[]]≜
04	Low battery	Beep once every second	<u>[</u> ]Y_ ∧
07	Overload	Beep once every 0.5 second	
10	Output power derating	Beep twice every 3 seconds	[ID] <sup>▲</sup>
15	PV energy is low.	Beep twice every 3 seconds	
16	High AC input (>280VAC) during BUS soft start	None	<u></u>
69	Battery equalization	None	[E9] <sup>a</sup>
68	Battery is not connected	None	ĿP^

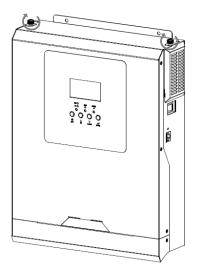

## **CLEARANCE AND MAINTENANCE FOR ANTI-DUST KIT**

#### **Overview**

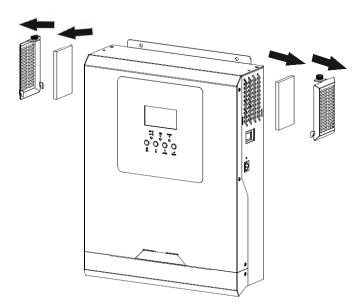

Every inverter is already installed with anti-dusk kit from factory. This kit keeps dusk from your inverter and increases product reliability in harsh environment.

#### **Clearance and Maintenance**

Step 1: Please loosen the screw in counterclockwise direction on the top of the inverter.

Step 2: Then, dustproof case can be removed and take out air filter foam as shown in below chart.

Step 3: Clean air filter foam and dustproof case. After clearance, re-assemble the dust-kit back to the inverter.

**NOTICE:** The anti-dust kit should be cleaned from dust every one month.

## **SPECIFICATIONS**

Table 1 Line Mode Specifications

INVERTER MODEL	1.5KVA	
Input Voltage Waveform	Sinusoidal (utility or generator)	
Nominal Input Voltage	230Vac	
Low Loss Voltage	170Vac±7V (UPS); 90Vac±7V (Appliances)	
Low Loss Return Voltage	180Vac±7V (UPS); 100Vac±7V (Appliances)	
High Loss Voltage	280Vac±7V	
High Loss Return Voltage	270Vac±7V	
Max AC Input Voltage	300Vac	
Nominal Input Frequency	50Hz / 60Hz (Auto detection)	
Low Loss Frequency	40±1Hz	
Low Loss Return Frequency	42±1Hz	
High Loss Frequency	65±1Hz	
High Loss Return Frequency	63±1Hz	
<b>Output Short Circuit Protection</b>	Circuit Breaker	
Inrush Current	18A	
Efficiency (Line Mode)	>95% ( Rated R load, battery full charged )	
Transfer Time	10ms typical (UPS); 20ms typical (Appliances)	
<b>Output power derating:</b> When AC input voltage drops to 170V, the output power will be derated.	Output Power Rated Power 50% Power 90V 170V 280V Input Voltage	

Table 2 Inverter Mode Specifications

INVERTER MODEL	1.5KVA
Rated Output Power	1500W with PV + battery 1200W with battery only
Output Voltage Waveform	Pure Sine Wave
Output Voltage Regulation	230Vac±5%
Output Frequency	50Hz
Peak Efficiency	93%
Overload Protection	5s@≥130% load; 30s@105%~130% load
Surge Capacity	2* rated power for 5 seconds
Power Factor Range	0.9 lead-0.9 lag
Max. Output Fault Current	10A
Max. Output Overcurrent Protection	10A
Nominal DC Input Voltage	12Vdc
Cold Start Voltage	11.5Vdc
Low DC Warning Voltage	
@ load < 50%	11.5Vdc
@ load ≥ 50%	11.0Vdc
Low DC Warning Return Voltage	
@ load < 50%	11.7Vdc
@ load ≥ 50%	11.5Vdc
Low DC Cut-off Voltage	
@ load < 50%	10.7Vdc
@ load ≥ 50%	10.5Vdc
High DC Recovery Voltage	15Vdc
High DC Cut-off Voltage	16Vdc
No Load Power Consumption	<35W

Table 3 Charge Mode Specifications

INVERTER MODEL		1.5KVA	
Utility Chargin	g Mode		
Charging Algorithm		3-Step	
AC Charging Current (Max)		80Amp (@V <sub>I/P</sub> =230Vac)	
Bulk Charging Flooded Battery		14.6	
Voltage	AGM / Gel Battery	14.1	
Floating Charg	ing Voltage	13.5Vdc	
Charging Curve		Battery Voltage, per cell 2.43vtc (2.35vtc) 2.25vtc 2.25vtc 4 4 4 4 50% 50% 50% 50% 50% 50% 50% 50%	
MPPT Solar Cha Max. PV Array		2500W/*	
Nominal PV Vo		2500W*	
	-	240Vdc	
Start-up Voltage		70Vdc +/- 10Vdc	
PV Array MPPT Voltage Range Max. PV Array Open Circuit Voltage		30~400Vdc (30~60V with Battery)	
-		400Vdc	
Max. Input Cur		11Amp	
Max Charging Current (AC charger plus solar charger)		80Amp	

\*Max. PV power can be achieved only within the PV voltage range of 250Vdc~400Vdc.

Table 4 General Specifications

INVERTER MODEL	1.5KVA	
Safety Certification	CE	
Protective Class	I	
Ingress Protection	IP21	
Operating Temperature Range	-10°C to 50°C	
Storage temperature	-15°C~ 60°C	
Humidity	5% to 95% Relative Humidity (Non-condensing)	
Dimension (D*W*H), mm	90 x 288 x 357	
Net Weight, kg	6.6	

## **TROUBLE SHOOTING**

Problem	LCD/LED/Buzzer	Explanation / Possible cause	What to do
Unit shuts down automatically during startup process.	LCD/LEDs and buzzer will be active for 3 seconds and then complete off.	The battery voltage is too low (<1.91V/Cell)	<ol> <li>Re-charge battery.</li> <li>Replace battery.</li> </ol>
No response after power on.	No indication.	<ol> <li>The battery voltage is far too low. (&lt;1.4V/Cell)</li> <li>Internal fuse tripped.</li> </ol>	<ol> <li>Contact repair center for replacing the fuse.</li> <li>Re-charge battery.</li> <li>Replace battery.</li> </ol>
Mains exist but the unit works in battery mode.	Input voltage is displayed as 0 on the LCD and green LED is flashing.	Input protector is tripped	Check if AC breaker is tripped and AC wiring is connected well.
	Green LED is flashing.	Insufficient quality of AC power. (Shore or Generator)	<ol> <li>Check if AC wires are too thin and/or too long.</li> <li>Check if generator (if applied) is working well or if input voltage range setting is correct. (UPS→Appliance)</li> </ol>
	Green LED is flashing.	Set "Solar First" as the priority of output source.	Change output source priority to Utility first.
When the unit is turned on, internal relay is switched on and off repeatedly.	LCD display and LEDs are flashing	Battery is disconnected.	Check if battery wires are connected well.
Buzzer beeps continuously and red LED is on.	Fault code 07	Overload error. The inverter is overload 105% and time is up.	Reduce the connected load by switching off some equipment.
		If PV input voltage is higher than specification, the output power will be derated. At this time, if connected loads is higher than derated output power, it will cause overload.	Reduce the number of PV modules in series or the connected load.
	Fault code 05	Output short circuited.	Check if wiring is connected well and remove abnormal load.
		Temperature of internal converter component is over 120°C.	Check whether the air flow of the unit is blocked or whether the ambient temperature is too high.
	Fault code 02	Internal temperature of inverter component is over 100°C.	
	Fault code 03	Battery is over-charged.	Return to repair center.
		The battery voltage is too high.	Check if spec and quantity of batteries are meet requirements.
	Fault code 01	Fan fault	Replace the fan.
	Fault code 06/58	Output abnormal (Inverter voltage below than 190Vac or is higher than 260Vac)	<ol> <li>Reduce the connected load.</li> <li>Return to repair center</li> </ol>
	Fault code 08/09/53/57	Internal components failed.	Return to repair center.
	Fault code 51	Over current or surge.	Restart the unit, if the error happens again, please return to repair center.
	Fault code 52	Bus voltage is too low.	
	Fault code 55	Output voltage is unbalanced.	
	Fault code 59	PV input voltage is beyond the specification.	Reduce the number of PV modules in series.
